

# Superfast broadband has arrived in your area

## Work faster, work smarter with superfast broadband:

- Get online instantly
- Talk face-to-face with friends and family using Skype or other software
- Stream HD films, TV shows and videos
- Share your photos with friends and family
- Upload to your social networking site quickly and easily
- Backup your data seamlessly
- Work from home, whether occasionally or to run a business – now you can really compete in the global marketplace
- Save costs in the workplace by allowing hot-desking and remote working (and a better quality of life for your employees as well)
- Multiple devices can be connected at the same time
- With some Internet Service Providers you can even use your home superfast broadband when you're out and about

## What do you need to do?

1. To check that your line is ready to go superfast visit [www.dslchecker.bt.com](http://www.dslchecker.bt.com)
2. Sign up with an Internet Service Provider for superfast services. Remember to check different providers for the best rates that meet your needs. For more information check out an independent reviewer such as [www.moneysavingexpert.com](http://www.moneysavingexpert.com)

## Superfast broadband – always on, always ready

**Please note:** In some circumstances unexpected issues may arise that could affect the rollout of fibre in your area, even if the fibre cabinet has been built. When fibre becomes available, there is no guarantee that you will be able to achieve superfast speeds at your property, due to the distance from the cabinet and/or the quality of your copper connection.
